

Digital Evidence Management & Crime Record Tracking System

1-Overview

This project is a Python-based application developed for managing criminal investigations and digital evidence records.

The system allows officers to:

- Add crime cases
- Search cases
- Update investigation status
- Manage evidence records
- Generate reports
- Store records using JSON files

2-Technologies Used

- Python
- OOP
- JSON
- CSV
- Tkinter (Optional GUI)

3-Features

- Case Management
- Evidence Tracking
- Report Generation
- Search and Filtering
- Error Handling

4-Steps to Run the Project

1- Clone the repository –

```
git clone https://github.com/srishtiarora270-oss/Digital-Evidence-Management-System.gitcd Digital-Evidence-Management-System
```

- 2- Run the main application - `python main.py`
- 3- Optional: Run tests - `python gui.py`

5- Folder Structure Explanation

—— data/	# Stores evidence and case-related files
—— reports/	# Generated reports
—— case_manager.py	# Case management logic
—— dems_ui.py	# GUI implementation
—— evidence_manager.py	# Evidence handling logic
—— report_generator.py	# Report generation module
—— storage_utils.py	# Storage and file utilities
—— utils.py	# Helper functions
—— main.py	# Entry point of the application
—— test.py	# Test cases
—— README.md	# Project documentation

6-Sample Outputs / Screenshots
